

CreaseMatic Auto50

Programmable Card Creaser

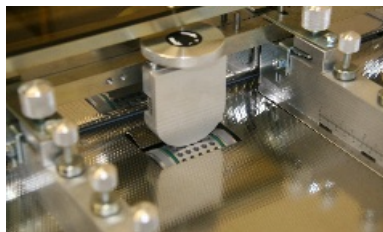

The CreaseMatic Auto50 suction fed programmable Card Creaser, manufactured in the UK by KAS Paper Systems, creates quality creasing and perforating on litho and digitally printed work. The rise and fall platen creasing action enables positive accurate creasing on stock up to 400gsm at over 8000 sheets per hour.

Built in perforating wheel which is easily engaged for in-line perforating.

Programming and operation is via easy to use Touch Screen control panel.

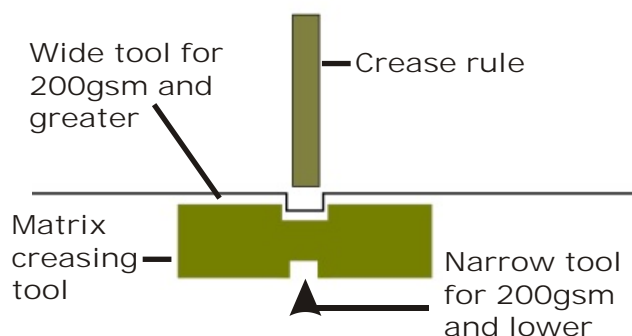

Centre suction feed to avoid skewing.

One creasing tool is designed to attach a self adhesive channel matrix. These are available in many widths and particularly useful for lighter weight stocks.

CreaseMatic AUTO50 - STANDARD FEATURES

- Over 8000 sheets per hour
- Two reversible creasing tools providing different width channels for stock up to 400gsm
- Top load bottom feed suction system designed for continuous production
